

# Snowplow Grease

## PRODUCT DESCRIPTION:

JAX Snowplow Grease is a heavy-duty water-resistant lubricant that is proven to be the most technically advanced grease for sliding steel-on-steel snowplow applications available on the market today!

Snowplow Grease was developed and tested in conjunction with a number of snowplow OEMs on wing posts of multiple configurations and husting hitches. It was tested in a variety of applications such as runways, freeways, and urban and rural roads. The temperatures ranged from -30°F in northern Minnesota to slush conditions in the Denver area. JAX Snowplow Grease resolved all of the lubrication-related binding and hang-up problems. Snow, slush, salt or water had no detrimental effect on the performance of this product.

## PRODUCT BENEFITS:

- Stays on for a full plowing shift
- Eliminates plow sticking and hang-ups due to lubrication
- Reduces downtime
- Won't peel or scrape off in severe cold
- Won't wash off in wet snow or slush
- Won't absorb water into the texture of the grease

## TECHNICAL DATA:

Propellant:	Butane and Propane
Flash Point:	Grease Base Fluid: 396°F (202°C), typical
Pour Point:	Grease Base Fluid: -36°F (-38°C), typical
Spray Pattern:	Shotgun Blast
Viscosity:	68 cSt at 40° Base Fluid, typical
Texture:	Thick Dark Grease with MoS <sub>2</sub> Graphite Particulates
Appearance:	Black Grease
Consistency:	Heavy
Specific Gravity:	0.92 for Concentrate, typical

## AEROSOL PACKAGING:

10 oz. net weight aerosol cans (12/case) — Part # JAX120
