

Replacement Wear Parts

COMBI parts® is an integrated system of earthmoving tools for excavators and loaders. The system is both innovative and well proven. Its outstanding success is largely due to the unique coupling geometry. Simplicity, user-friendliness and cost-efficiency are amongst the goals set for all our designs. Combi wear parts are available through a large number of specially selected Combi partners.

The COMBI system

- Is the market leader in wear ratio – longer tooth life reduces downtime.
- Uses high-strength, low-profile components – weight savings increase efficiency.
- Has a wide range of adapters and teeth – maximum versatility and optimum penetration.
- Offers a large choice of shroud combinations – prolonged bucket life reduces costs.
- Is a total solution – puts both the user and the environment in focus.
- Comes with a warranty against breakage and tooth loss.

- C-lock -- quick, secure, userfriendly and shielded from external impact.
- Tight fit between adapter and tooth -- minimum play, maximum performance.
- Special, self-sharpening tooth -- a wear ratio of up to 70%!
- Patented protection -- teeth worn through from the underside remain firmly in place.
- Tooth protects the adapter -- superior service life.
- Very robust, low profile adapter -- optimum strength and efficiency.
